**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to an extrusion apparatus, classified in class 425, subclass 325.
- II. Claims 20-21, drawn to a golf ball preform, classified in class 428, subclass 542.8.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of groups I and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown:

(1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case, the apparatus as claimed is not an obvious apparatus for making the product since the apparatus does not have dimple forming structures and the apparatus can be used for making a different product, such as any of a variety of solid balls with a rubber core including a baseball.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Group I, claims 1-11 of this application contains claims directed to the following patentably distinct species of the claimed invention:

Species I, Figures 4-8;

Species II, Figures 9-11.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic. Additionally, the Examiner would like to point out that claim 10 appears to be incorrectly dependent on claim 1. While claim 10 cites a sheeter, there is actually no sheeter in the species in which there is "core stock being extruded through the at least one die" (claim 10) since sheets are only formed by rollers 100 and 102. Rollers 100 and 102 are not included in Species II, nor are they needed in claims 10-11. The Examiner suggests rewriting claim 10 in independent form.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1722

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. During a telephone conversation between Examiner, Dr. Mark Eashoo, and Applicant's attorney, Ms. Michelle Bugbee, on 4/9/03 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-11. However, a new election must be made pursuant to the new, complex restriction requirement made in this Office action. The Applicant may now elect Group II, or the Applicant may elect a species within Group I and if so the Applicant must include a listing of all claims readable thereon, including any claims subsequently added.
